

## **Molecular Laboratory Director**

GeneCentric is seeking a Molecular Laboratory Director to join a growing team in Durham, North Carolina. GeneCentric is a biotech company developing novel cancer taxonomy diagnostics to facilitate more efficient drug development and improved patient care. The successful applicant will have an exciting opportunity to build a research/clinical laboratory operation and team to support research and development efforts in cancer genomics and tumor subtyping. The successful candidate will work closely with the Research and Clinical Development group investigating and validating analytic methods to support research goals. The Laboratory Director may also interact with external collaborators including Pharma representatives, Device and Platform manufacturers, and/or academic investigators as part of clinical development activities. He/She will be responsible for developing policies and procedures to meet quality standards and analytic performance requirements and will train and supervise several technologists in meeting the required standards.

### Qualifications and Skills Required

- At least 5 years of managerial experience in a clinical molecular laboratory
- Knowledge and experience using a variety of molecular techniques for nucleic acid extraction, digital PCR, library prep, next generation sequencing, etc
- Knowledge and experience with evaluation of commercially available diagnostic platforms supporting molecular testing including NGS platforms
- Experience in oncology related molecular testing methods specific to tissue samples
- Experience with CLIA, CAP, and NY State regulatory requirements for molecular and genomic testing laboratories including assay validation requirements
- Experience conducting drug development clinical studies
- Strong oral and written communication skills for interactions internally with research and development staff and externally with collaborators and/or clients

### Education and Experience

- MD or PhD in genomics, genetics, molecular biology, pathology, or similar field is required
- 7 of more years experience in a molecular clinical laboratory is required with at least 5 years in a leadership position
- Certification by one of the following professional societies is preferred but not required (ACMG, ABMGG, ABMM, or equivalent).
