

Senior Director – Information Technology

GeneCentric is seeking a senior IT Director to join a growing team in Durham, North Carolina. GeneCentric is a biotech company developing novel cancer taxonomy diagnostics to facilitate more efficient drug development and improved patient care. The successful applicant will have an exciting opportunity to lead the company's IT network development including the establishment of a computational secure network for genomic analyses. The successful candidate will advise management with regards to external IT network service vendors computer hardware/ software needs. The IT director will coordinate and supervise IT activities and will serve as the liaison between GeneCentric management, computational scientist staff, and external service providers to assure company objectives are met. The Senior Director will help establish standard operating procedures for maintenance of secure operations across the various IT networks. He/She will also represent the company's IT infrastructure and secure network to external clients including management of associated audits.

Qualifications and Skills Required

- Experience managing a secure IT network and other IT staff
- Knowledge of business environment IT networks and systems as well as hardware and software solutions
- Experience in evaluating and implementing IT systems and software
- Experience in establishing or managing a genomics computational IT environment is preferred
- Excellent organizational skills to assure compliance with maintenance of secure environment, smooth implementation of IT changes, training of new employees, etc.
- Ability to communicate successfully with both developers as well as with non technical staff
- Strong oral and written communication skills for interactions internal and external to the organization

Education and Experience

- Bachelors or Masters degree in Computer Science or Electric Engineering with a minimum of 10 years of relevant work experience including at least 5 years in leadership/management roles
